Ateeb Mohammad

Artificial Intelligence Engineer | Generative AI | NLP | Machine Learning
Dubai, United Arab Emirates | mdateeb3266@gmail.com | linkedin.com/in/ateeb-mohammad
Nationality: Indian | Visa Status: UAE Visit Visa | Availability: Immediate Joiner

Professional Summary

Artificial Intelligence Engineer with hands-on experience building and integrating **production-grade AI/ML systems**, including RAG applications, LLM-powered chatbots, data-analysis agents, document intelligence workflows, and machine-learning solutions. Strong in **Python, SQL, AI agents, agentic workflows, semantic retrieval, vector databases, NLP, OCR, data processing, model evaluation, validation, and production application development**. Delivered 3 production AI/ML solutions and designed end-to-end workflows from ingestion and preprocessing through retrieval, model interaction, grounded generation, validation, and software integration. Experienced translating business requirements into maintainable AI capabilities, with a strong focus on **reliability, traceability, automation, system integration, and technical documentation**.

Technical Skills

• **Programming & Software:** Python, SQL, SQLite, Pandas, C++, Git, GitHub, production application development

• **AI/ML:** Machine Learning, Model Training, Model Evaluation, Data Preprocessing, Feature Engineering, Statistical Analysis, Classification, Pattern Recognition

• **Generative AI & Agents:** Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Agents, Agentic Workflows, Grounded Generation, Conversational AI

• **Data & Databases:** ChromaDB (Vector Database), SQLite, Embeddings, Semantic Retrieval, Query Routing, document processing, OCR (Tesseract), OpenCV, layout-aware ingestion

• **Automation & Integration:** AI workflow automation, data-analysis automation, document-processing automation, validation workflows, software integration, hardware-software integration

• **Engineering & Reliability:** Production systems, system optimization, reliability improvement, monitoring, validation and quality checks, technical documentation, cross-functional delivery

• **Frameworks & Platforms:** Streamlit, Qwen3, Ollama, ROS, ROS 2

Professional Experience

Artificial Intelligence Engineer **Aug 2025 - Present**
Siyaton Global Solutions Inc. Hyderabad, India

• Delivered **3 production-grade AI/ML solutions** — data-analysis agents, conversational chatbots, and RAG pipelines — using Python and LLM-powered workflows.

• Designed end-to-end **AI agent and workflow architectures** covering data ingestion, preprocessing, retrieval, model interaction, grounded response generation, validation, and integration into software products.

• Developed reusable prompt-engineering and structured LLM interaction patterns to improve response relevance, consistency, and usability across user-facing AI applications.

• Applied semantic retrieval, vector databases, embeddings, query routing, document processing, and grounded generation to build reliable AI solutions for business workflows.

• Built validation and quality-check patterns to improve reliability, traceability, and operational consistency of AI-generated outputs.

• Partnered with cross-functional engineering teams to translate business requirements into functional AI capabilities and integrate AI models into core software products.

• Contributed to production-oriented troubleshooting, workflow refinement, and maintainable system delivery across AI/ML applications.

AI and Robotics Intern **Jan 2025 - Jul 2025**
AI Variant Hyderabad, India

• Applied ROS and ROS 2 to autonomous robotics architectures, including sensor integration, navigation, perception, and automation workflows.

• Supported engineering activities involving automation configuration, system optimization, reliability improvement, testing, and software-hardware integration.

Drone Engineer **Mar 2023 - Nov 2024**
Aarav Unmanned Systems Private Limited Bengaluru, India

• Completed **20+ aerial-mapping missions** for Government of India infrastructure surveys with a **95%+ UAV mission success rate** in challenging terrain.

• Processed geospatial survey data into orthomosaic maps supporting infrastructure assessment and project delivery for government stakeholders.

• Applied real-time monitoring, data processing, operational checks, and corrective decision-making to maintain reliable mission outcomes.

Wireless Communication Intern **May 2022 - Feb 2023**
Astrome Technologies Pvt. Ltd. Bengaluru, India

• Supported development and testing of the GigaMesh mmWave backhaul platform through RF link-budget analysis, field measurements, and wireless-link evaluation.

• Assisted with hardware-software integration, micro-firmware validation, testing, and technical documentation activities.

Key AI / Machine Learning Projects

Agentic Multilingual RAG Knowledge Assistant
Python, RAG, SQLite, ChromaDB, OCR, Tesseract, OpenCV, Qwen3, Ollama

• Built a multilingual **agentic, local-first RAG system** supporting 6 languages — English, Telugu, Hindi, Kannada, German, and Arabic — for native and scanned PDF processing.

• Reduced estimated manual document-search time by **98%** using adaptive OCR, layout-aware ingestion, semantic retrieval, and cross-script entity matching.

• Combined deterministic SQLite querying with ChromaDB semantic retrieval through an intelligent **query router** for exact lookups, filters, counts, ranges, sorting, and natural-language questions.

• Added source tracking, OCR-confidence metadata, and grounded generation to improve response traceability, auditability, and answer reliability.

AI-Powered Data Analysis Chatbot
Python, Pandas, SQL, LLMs, Streamlit, Data Visualization

• Developed an LLM-powered natural-language data-analysis application enabling non-technical users to clean, transform, aggregate, and analyze structured datasets without writing Python or SQL.

• Built conversational workflows supporting dataset upload, follow-up questions, dynamic visualizations, automated KPI summaries, and trend/statistical analysis.

• Implemented validation checks to improve reliability of generated data operations and analytical outputs.

AI-Based Intrusion Detection System
Python, Machine Learning, Cybersecurity

• Built a machine-learning intrusion detection system to identify and classify suspicious network activity using data preprocessing, feature analysis, model training, and evaluation.

• Benchmarked machine-learning predictions against rule-based intrusion-detection baselines, applying model evaluation to compare detection performance.

Autonomous Obstacle-Avoiding Mobile Robot
Python, ROS, ROS 2, Autonomous Navigation

• Developed a ROS/ROS 2 mobile robot with real-time sensor-data filtering for localization and environmental perception.

• Implemented mapping, spatial path planning, and obstacle-avoidance algorithms for safe navigation in dynamic environments.

Fingerprint Authentication Module for Automobile Ignition
C++, Embedded Systems, IoT

• Designed a biometric security module using C++, a microcontroller, and an optical fingerprint sensor for authorized-user verification.

• Developed an authentication-controlled ignition workflow that blocks vehicle access after unsuccessful verification attempts.

Education

Bachelor of Technology in Electronics and Communication Engineering 2022

Jain (Deemed-to-be University), India CGPA: 7.2/10

Higher Secondary Education (Intermediate) 2018

Narayana Junior College, India CGPA: 9.5/10

Role-Relevant Strengths

Production AI/ML Development | Python & SQL | AI Agents & Agentic Workflows | RAG & LLM Applications | Workflow Automation | Semantic Retrieval & Vector Databases | NLP & Document Intelligence | Validation & Reliability | Software Integration | Data Processing | Cross-functional Delivery | Dubai On-site Availability
